About us

Kevych Solutions – European software development company, dedicated to delivering innovative, high-quality solutions tailored to your unique needs.

Mobile Development

We craft sleek and functional mobile applications tailored to your unique business needs.

Web Development

From responsive websites to complex web applications, we deliver cutting-edge digital solutions.

UX/UI Design

Our intuitive and visually stunning designs enhance user experiences, fostering increased engagement.

Software Testing

Detailed testing ensures the reliability and performance of your software solutions.

MVP Development

We guide you through the initial stages, helping you validate your ideas and launch a successful MVP quickly.

Hiring Service

We connect you with skilled professionals tailored to your product needs, ensuring you have the right team to bring your vision to life.

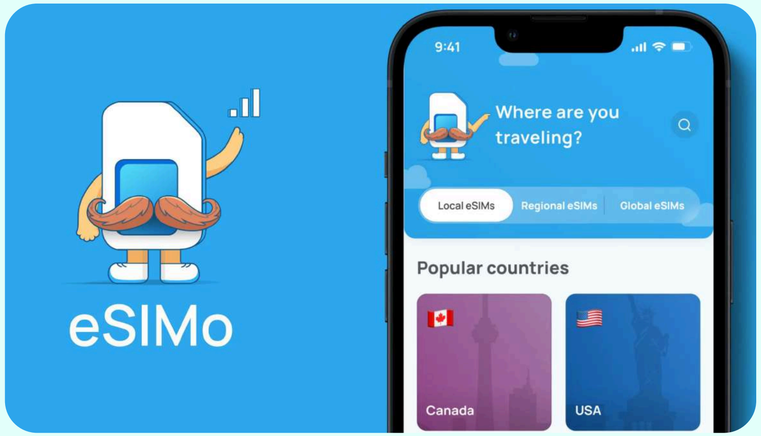
Projects

Kevych Solutions
Software Development

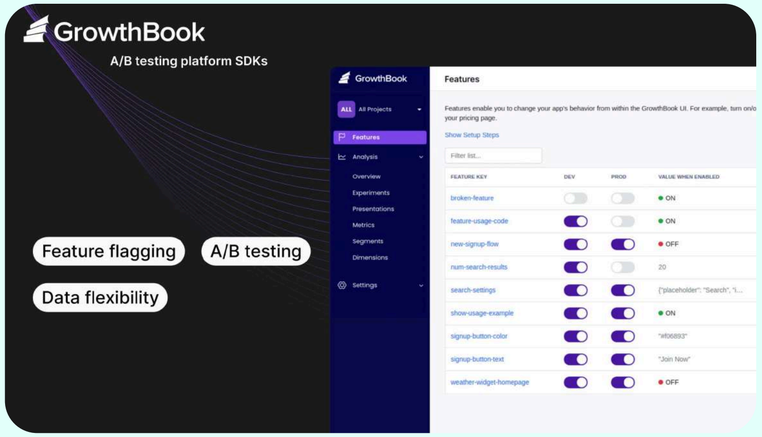


eSIMo

Country: 🇮🇱 Israel

Problem: The client wanted to restructure for Android and iOS, develop an admin panel for their product, and integrate their Webflow-built website with Firebase.

Solution: We've developed applications for iOS and Android devices, as well as created a specialized admin panel. This panel allows managing users, their purchases, eSIM packages, and providing support through Intercom. Additionally, we have successfully connected the website developed on Webflow with Firebase.



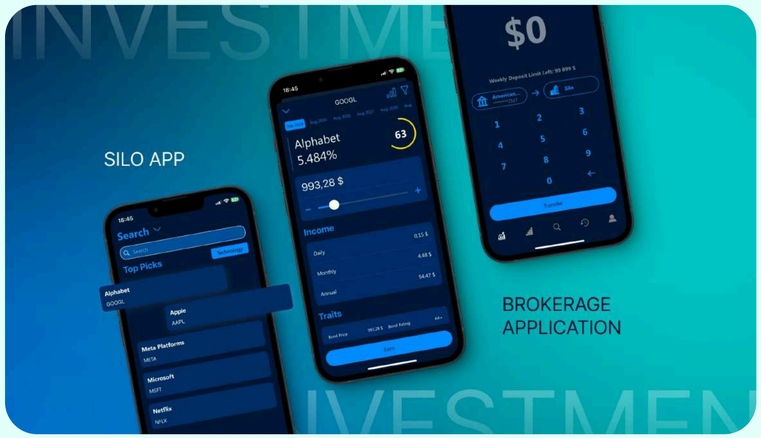
GrowthBook

Country: 🇺🇸 USA

Problem: Create iOS SDK for the A/B testing platform - Implement CI/CD and cover business logic with UnitTests - Maintaining iOS SDK Maintaining Android SDK.

Solution: First of all this SDK is open source, that's means that our code quality meet high-level standards by covering all business logic with UnitTests.
It was very important to keep the project working autonomously using CI/CD integration which includes creating a framework and publishing on SPM and CocoaPods.

2025



Silo

Country: 🇺🇸 USA

Problem: The client wants to create a brokerage application for USA citizens.

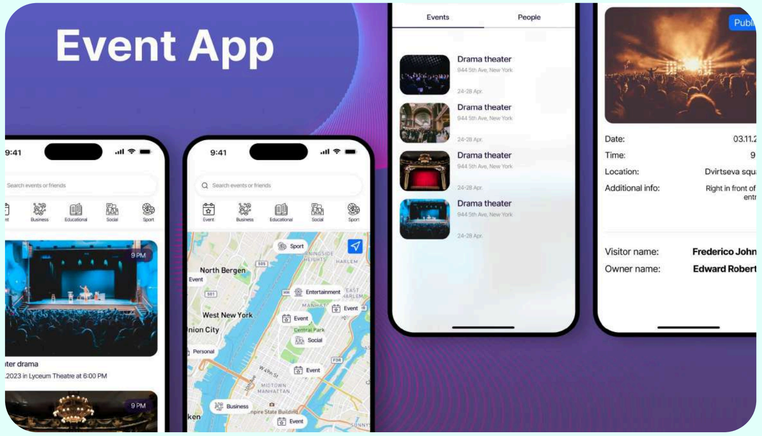
Solution: Create an app for investment advisors, using IBKR API as a brokerage for the app.

OneXp

Country: 🇺🇸 USA

Problem: Realize unique solutions for online coaches that will show clients how exactly they move.

Solution: ReCreated a fully competitive app where user can schedule their meetings with coaches and implemented a custom drawing mechanism that allows users to draw different shapes on the video.

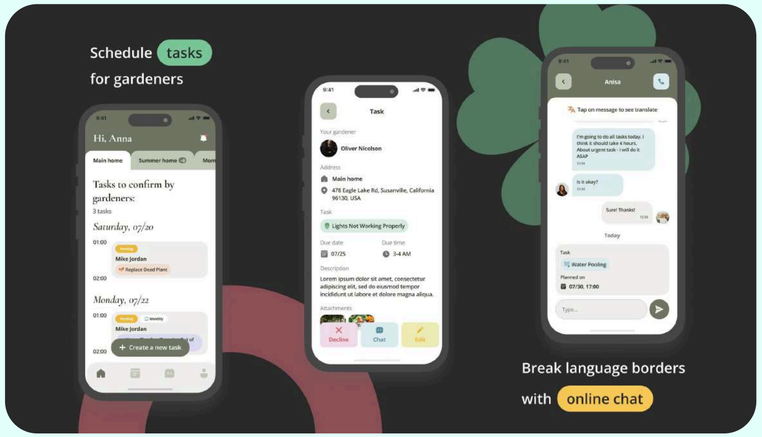


Event App

Country: 🇦🇪 UAE

Problem: Building the application to create and manage events across the globe, inviting people to them.

Solution: Create the app from scratch, creating design and requirements for the project. Applications for iOS and Android, as well as an admin panel for administration, were created.



YourYard

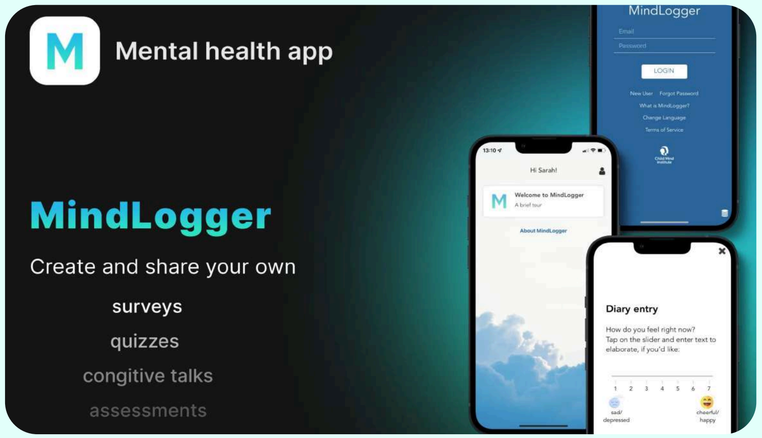
Country: 🇺🇸 USA

Problem: The client come to us with a problem of misunderstanding between Spanish and Americans workers.

Solution: We create an app where homeowners could schedule tasks, and chat with their gardeners, and we integrate translation EN/SP by tapping the text in chat. Also in the app, there is an ability to make/add photos or videos to tasks.

Kevych Solutions
Software Development

2025



MindLogger (Flanker)

Country: 🇺🇸 USA

Problem: Get the highest possible timestamp of the tap event. Get the highest possible timestamp when the user's eye saw the drawn object on the map. Need to integrate the solution into React Native app.

Solution: We wrote custom solutions by using low-level API to get scientific data for the customer. The custom solution includes two sides: - custom drawing of the objects (image) within the refresh rate of the screen. - custom touch even based on the touch update rate We implemented a bridge between React Native and the Native part.

Lil'broc

Country: 🇺🇸 USA

Problem: Develop application that can help people to know more about food in their refrigerator.

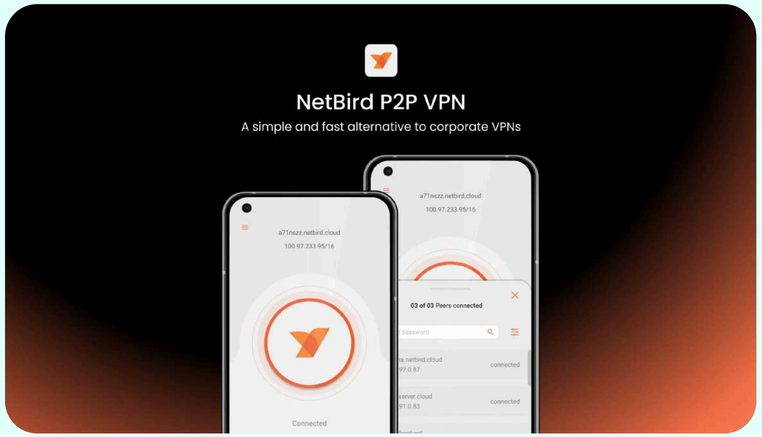
Solution: We make an application in which you can see which products stored in the refrigerator, shows the expiration date of the product and other data and a description of it, as well as interesting articles about growing vegetables and fruits.

Oracle X

Country: 🇸🇦 Saudi Arabia

Problem: The client came to us with wish to make his trading on stocks-markets easier.

Solution: We developed an application where you can get actual data on current sessions (London, New York and others).



NetBird

Country: 🇺🇸 USA

Problem: Create mobile (android yet) ReactNative wrapper on top of an existing VPN platform (Go)

Solution: Create screens, repair logic, add local push notification, fix android library errorsCreate screens from figma, repair logic, add local push notification, fix android library errors.

Kevych Solutions
Software Development

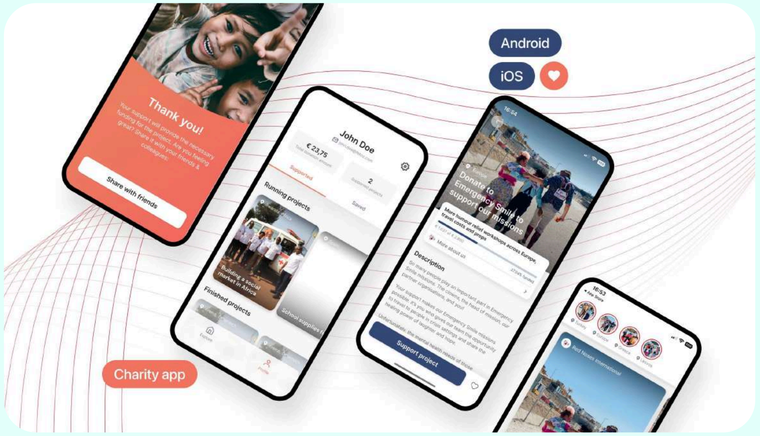
2025

Name under NDA

Country: 🇬🇧 United Kingdom

Problem: Clients task was to create an app for security company for better safety their clients

Solution: We have developed an application where security and client, both have apple watch though which they can communicate and say about danger



Felloz (Laughter Matters)

Country: 🇭🇷 Croatia

Problem: Rewrite the app from NS to RN, add additional functionality, and release the updates.

Solution: Rewrote all functionalities from the old app, created new screens, added Instagram stories component, and released the app on AppStore and PlayMarket.

Kevych Solutions
Software Development

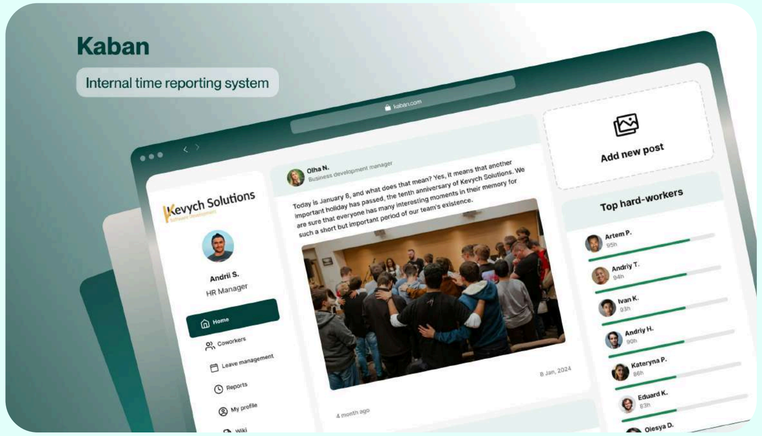
2025

Air Electric

Country: 🇩🇪 Germany

Problem: Implement a tab with navigation, as in Android.

Solution: Added a settings screen for route construction and a map screen displaying the route and nearby electric gas stations.



KABAN

Country: 🇺🇦 Ukraine

Problem: We need to create time tracking system for company.

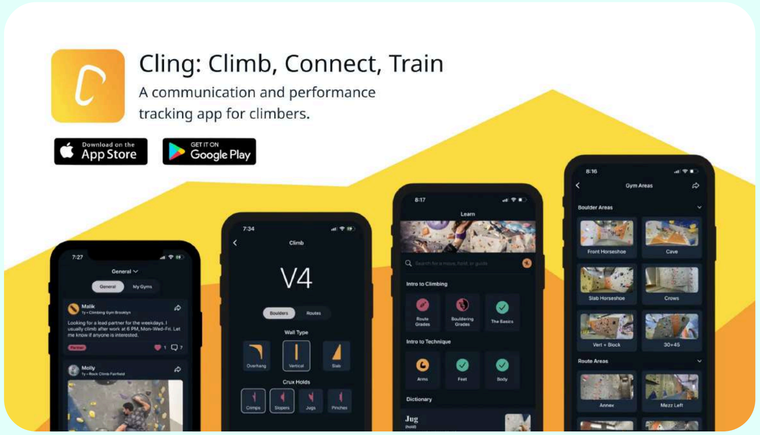
Solution: We have done a time-tracking system with descriptions of done work, also we have implemented adding friends and posting photos for your friends.

CarPlay

Country: 🇦🇪 UAE

Problem: The client wants to add CarPlay to an existing project.

Solution: We have developed an extension for CarPlay where was navigating, a list with nearest locations, and filter with prices and distance.



Cling

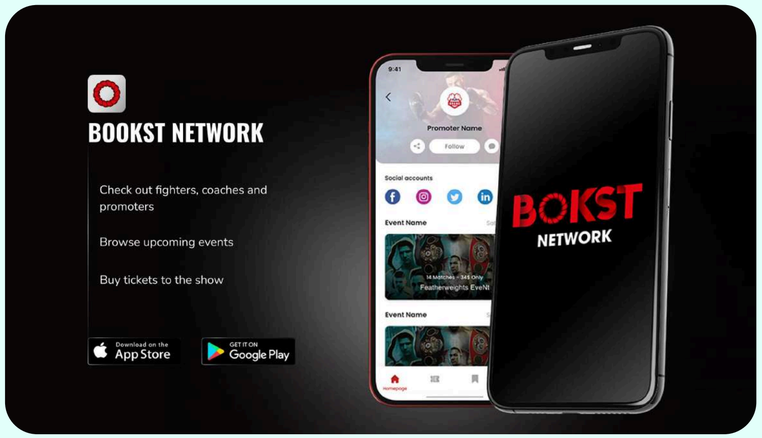
Country: 🇺🇸 USA

Problem: Develop the Cling app for Android based on the existing iOS version's structure, design, and architecture, noting that the provided design is incomplete and not fully detailed.

Solution: Developed an Android version of the Cling app, mirroring the iOS application code and structure.

Kevych Solutions
Software Development

2025



BOKST

Country: 🇬🇧 United Kingdom

Problem: Fix and launch the app, transfer it from RN CLI to the EXPO platform and write new functionality.

Solution: Fixed old app bugs, transferred modules to EXPO, updated iOS app, released Android version and added new functionality.

AI Chatbot

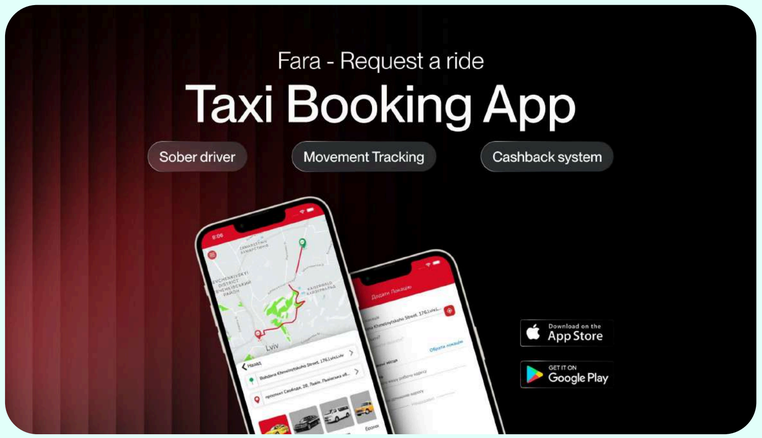
Country: 🇺🇦 Ukraine

Problem: There were different issue/ bugs that we need to fix and implement new features.

Solution: Fixed every problem and client made a request to support app and integrate Dall-E.

Kevych Solutions
Software Development

2025

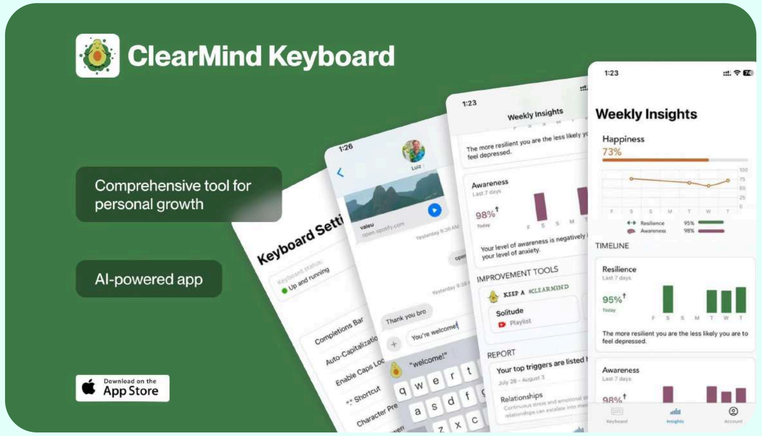


Fara

Country: 🇺🇦 Ukraine

Problem: We need to introduce a new feature to the existing app, and we also need to address issues that were created by previous developers. The app was not functioning properly at all.

Solution: We focused on the registration process and the main flow to ensure that the app works as expected. Additionally, we worked on the backend and admin panel to make sure that all systems were functioning as intended.



ClearMind

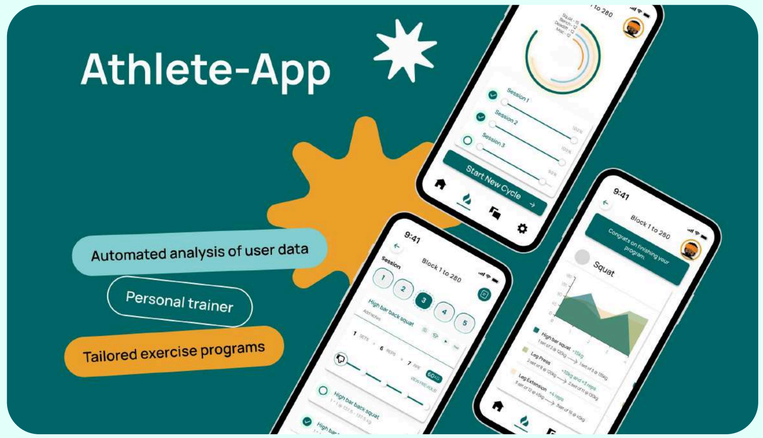
Country: 🇬🇧 United Kingdom

Problem: Client need to build keyboard feature isn't like any user used before. As you type your thoughts, feelings, and reflections, app will actively identifies and tracks trends in user levels of awareness and resilience.

Solution: We built a custom keyboard with AI features to track pressure on buttons, and use users' personalized data to suggest actionable steps for enhancing your resilience.

Kevych Solutions
Software Development

2025



Athlete-APP

Country: 🇦🇺 Australia

Problem: Write the front-end part from scratch according to the design, connect it to the backend, which is currently under development

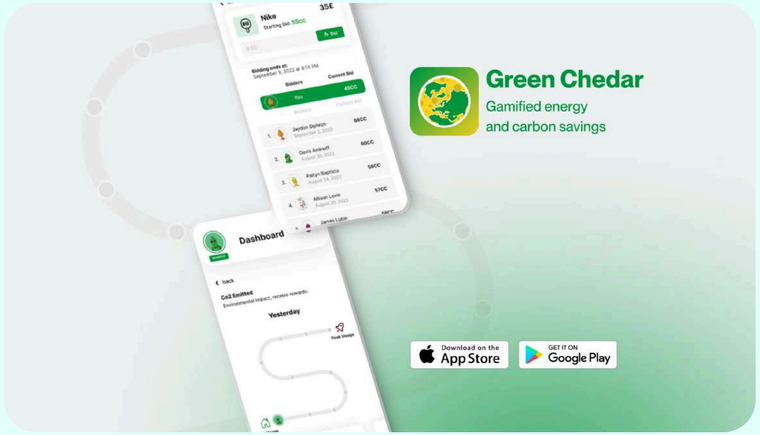
Solution: We worked on the implementation of the functionality described by the customer, at the same time we proposed improvements and fixes according to modern practices.

TAWS

Country: 🇺🇸 USA

Problem: Building custom components for Hivebrite: Online Community Platform

Solution: To build custom components for Hivebrite, we identified user requirements, integrated with Hivebrite's API, set up the development environment, and implemented the custom functionality using the appropriate development tools and technologies.

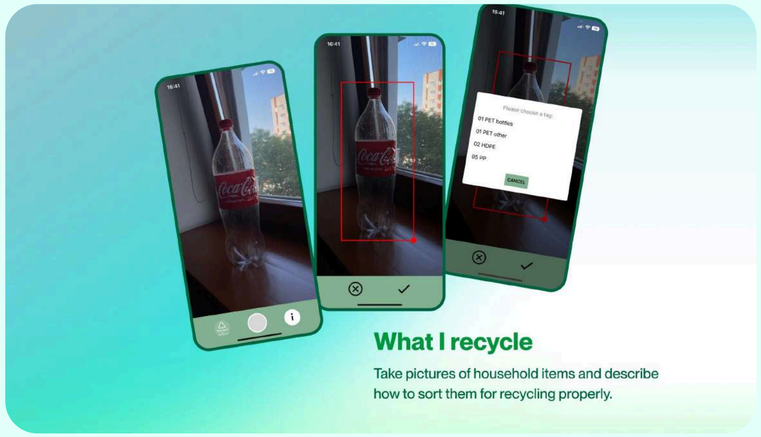


Green Cheddar

Country: 🇬🇧 United Kingdom

Problem: Resolve the issue with non-functioning deeplinks.

Solution: Fixed deep link issue on both iOS and Android, with adjustments to the Firebase setup and added scheme.

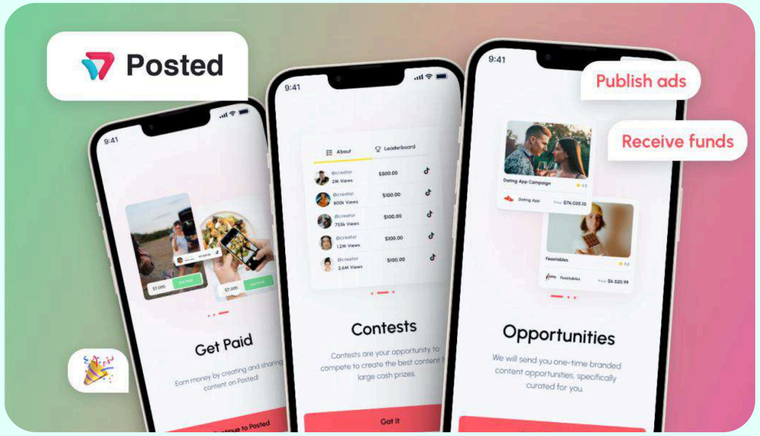


What I recycle

Country: 🇱🇻 Latvia

Problem: Our client meets with the problem of collecting information on garbage.

Solution: We developed an application for photographing, classifying, and retrieving text data about garbage.

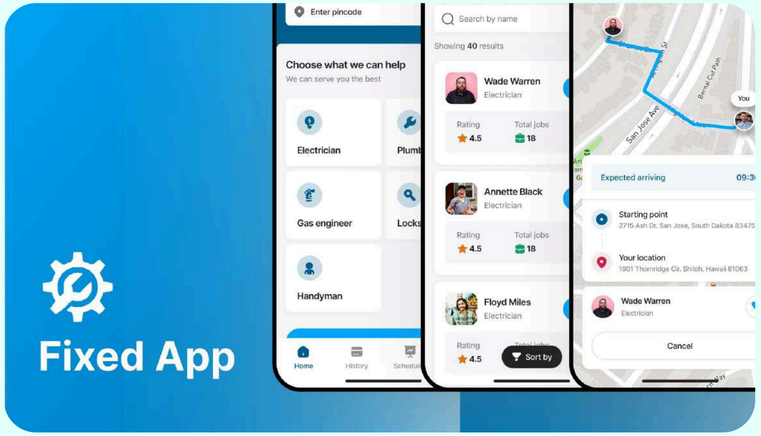


Posted App

Country: 🇺🇸 USA

Problem: Implement new features in an existing app, rewrite the design for the new elements, and address some bugs.

Solution: We reworked the design for new requirements, and also made changes to the application logic and fixed bugs.



Fixed App

Country: 🇬🇧 United Kingdom

Problem: The app for small company which is working on repair busineess.

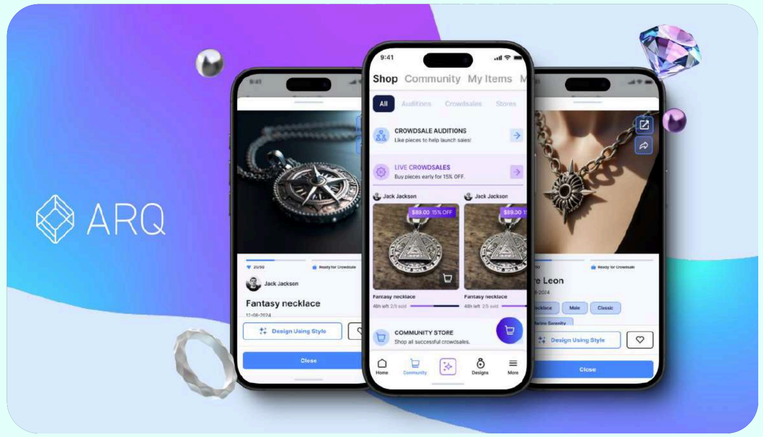
Solution: Our app is an online business platform (which was developed as two apps) for citizens and local repair masters for providing and ordering wreck amendment services. There is the ability to book a free worker, left feedback, saw the navigation of the route to the customer, and chat between two users.

Name under NDA

Country: 🇳🇱 Netherlands

Problem: App for customer that will increase life duration of battery for E-bike

Solution: We create an ap from scratch, for iOS. Made futuristic design, create scheduling, notification, auth and connect device to the Wi-Fi (MQTT server)

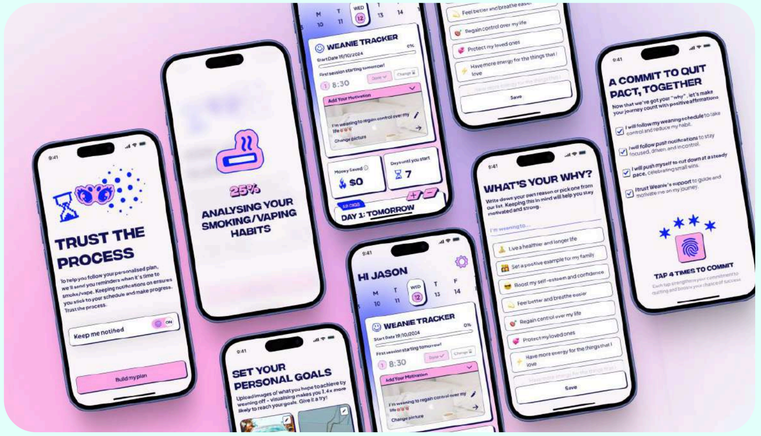


ARQ

Country: 🇺🇸 USA

Problem: Expanding the functionality of the ARQ Jewelry application, creating a Shopify plugin to increase the customer base

Solution: New functionality has been created in the application: Gallery view of the jewelry created by users, feature for sending internal currency as a gift, and the possibility of crowdfunding.
We have also created a Shopify plugin that other jewelry stores can integrate into their Shopify stores. With this plugin, the user can create a unique piece of jewelry with the help of AI and then order it.

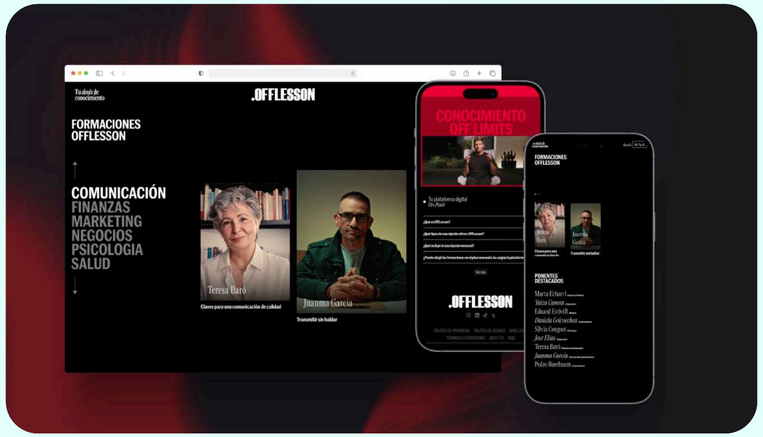


Weanie

Country: 🇦🇺 Australia

Problem: Develop a mobile application that helps users to gradually give up nicotine using a controlled reduction in the number of cigarettes smoked or vape cartridges used. The application should have a strong focus on user motivation.

Solution: Developed a Flutter-based quitting app with Firebase backend integration. Designed and implemented an algorithm to track smoking sessions and trigger push notifications. Built custom widgets for a seamless user experience.



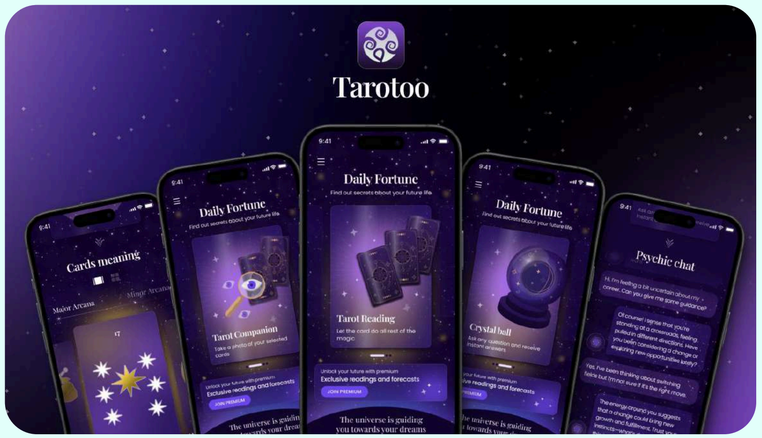
Offlesson

Country: 🇪🇸 Spain

Problem: Create a commercial website with educational videos. Provide the client ability to manage content and data themselves.

Solution: A web portal featuring training videos has been developed, along with an admin panel for managing materials and users. The Hamlet service is utilized for video storage, while Amplitude and Google Analytics have been integrated for analytics.

To ensure the security of content and prevent cheating and piracy, the most reliable methods were implemented during development.

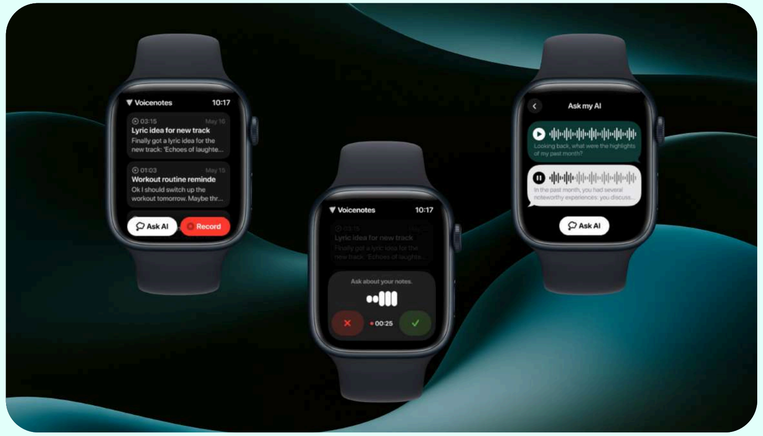


Tarotoo

Country: 🇺🇦 Ukraine

Problem: Develop a mobile app for tarot readings, incorporating all the features and spreads available on the website.

Solution: We created a mobile app featuring a unique design, and advanced custom animations. Additionally, we developed new functionality for the magic ball, AI-based chat with a magician, and a tarot companion feature that allows users to photograph their own cards and receive detailed readings.



Name under NDA

Country: 🇬🇧 United Kingdom

Problem: The client needed to extend the functionality of an existing app for audio recording and transcription into text. The task required developing user-friendly widgets and optimizing the app for smartwatches.

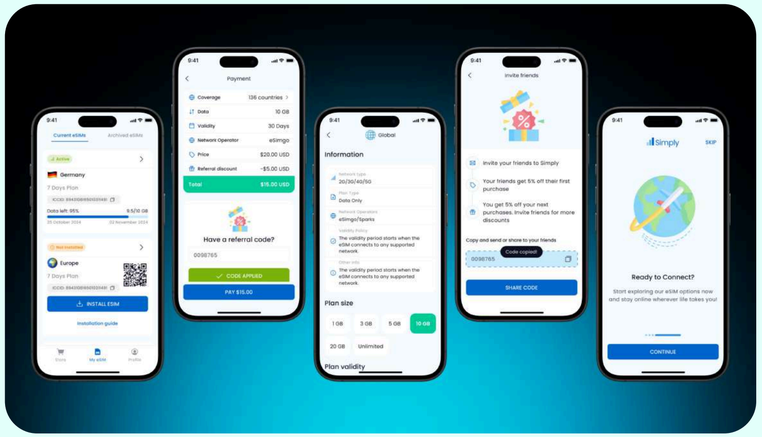
Solution: We created intuitive and functional widgets for quick access to key app features. Additionally, we developed a smartwatch-compatible version of the app with a seamless and efficient interface for smaller screens.

Post My Party

Country: 🇺🇸 USA

Problem: Developing a custom keyboard for using collections of inscriptions, photos, and gifs and quickly sharing them on social media.

Solution: Developed a custom keyboard for iOS and Android and connected it to an existing application.



Simply

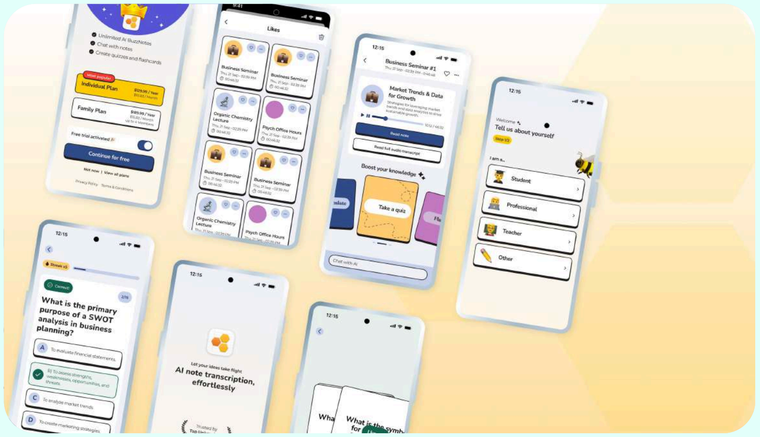
Country: 🇸🇦 Saudi Arabia

Problem: Develop a cross-platform mobile application for reselling eSim cards with a referral program and the simplest possible functionality. Admin panel for managing cards and users.

Solution: We have developed a cross-platform mobile application for the Arab market, integrated with tSIM and eSIM services for the purchase and use of e-SIM cards. The payment system is PayTabs. In the admin panel, the administrator can view data on SIM cards and customers. The administrator can also change the price displayed in the application in real time. The peculiarity of the process is payment in the Saudi Riyal currency.

Kevych Solutions
Software Development

2025

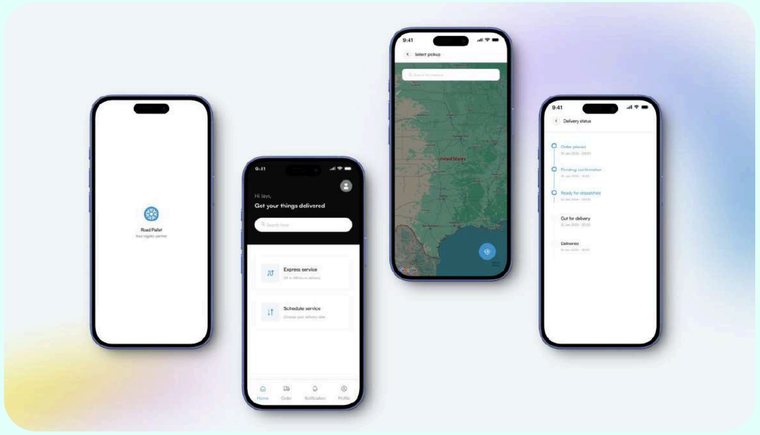


BuzzNotes

Country: 🇺🇸 USA

Problem: Developed an app for students enabling audio recording, automatic transcription, and AI-powered test generation based on the recorded content.

Solution: Developed an iOS app for audio recording with integrated transcription libraries to convert recordings into text. Implemented AI-powered features for generating notes, tests, and flashcards, along with an interactive AI chat for discussing notes. Added note translation and editing capabilities.

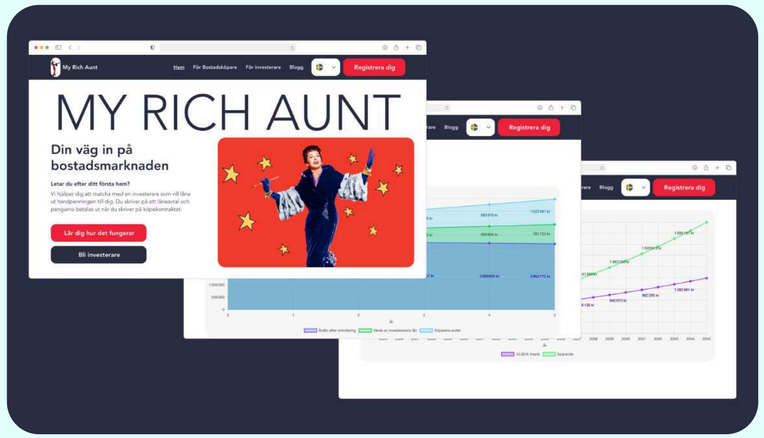


RoadPallet

Country: 🇸🇦 Saudi Arabia

Problem: Develop a mobile app from scratch to facilitate ordering, payment, and tracking of goods transported under specific storage conditions.

Solution: We developed a functional app that allows users to order transportation, make payments, and track delivery status through integration with the RoadLogistics service. The app provides transparency and control at every stage of the shipping process.

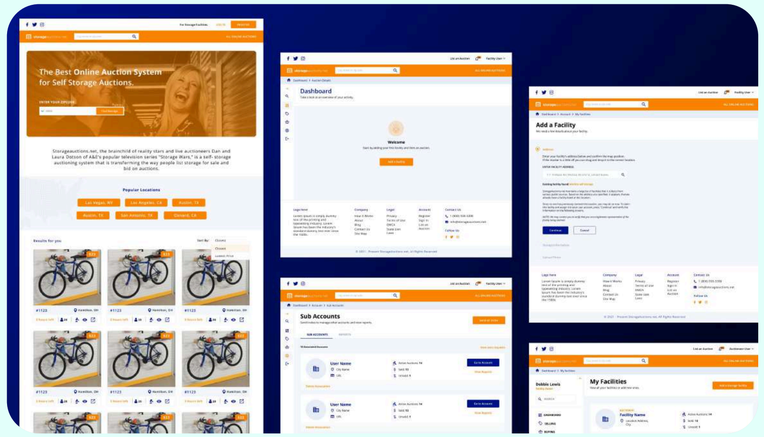


My Rich Aunt

Country: 🇸🇪 Sweden

Problem: Enhance the design of an existing WordPress site, implement user registration, and integrate dynamic graphs for a more interactive experience.

Solution: We created a modern website with WixStudio. With the help of Wix features, we implemented registration for different types of users. We also integrated custom charts into the website, powered by JavaScript and Chart.js for dynamic data visualization.



Storage Auction

Country: 🇺🇸 USA

Problem: Customize online storage auction with new features and bug fix from previous developers.

Solution: Fixing the existing functionality in the website, as well as modifying screens with a new design and adding new functionality.
